Give three observations/ suggestions to improve the overall teaching – learning experience in your college.

40 responses

Promote extra curricular  
Teach industry demanding skills  
Regular placement drives

teachers shouldn't disgrace students to join society  
they should focus on how to excel soft skills and other life skills other than focusing on academic only

A lot of time is wasted in setting up projectors. There are teachers who just read out of the ppts. They should put a little more effort in explaining it. Students also need to maintain the discipline during classes.

A councillor for students,sports society in college,interaction class in college for students,

More Student to student interaction with students of different courses.  
Good mentorship (counseling) should be given to students regarding their courses and goals.  
Teachers should discuss about exams and tell students about their strengths and weaknesses so that they know where and how to improve themselves....

Promote more inclusive earning  
Give less useless assignments  
Give more emphasis on practical knowledge

Idk I guess I need sometime to get into college life

1. teachers should cope up with extracurricular activities of student.  
2. Provide opportunities for internships of sm  ation for the regular experience and skills to be developed in stud  t help in future placements.  
3. provide mentorship to student for their future goals, as many of them are still unable to choose their right future goal

I can only give suggestions pertaining to Bcom. Hons. being a student.

1.) Starting with Business Law and Corporate Law, the lectures were delivered just to complete the syllabus and they were not really interested in the application part or have a discussion on it giving examples.

2.) Now, for Financial and Corporate Accounting, we were simply told that most of the syllabus you have already done in Class 11th and 12th, so we'll just discuss a bit and jump to the new chapters ignoring the fact that the difficulty of those topics have increased in the college level.

3.) Previously, I was in the commerce society and whenever we asked for the permission to hold an offline competition or seminar with an industry expert, the authorities simply use to deny.

4.) No one talks about how to plan the things after bachelors degree be it higher education or job or how to go about the things after this degree.

5.) When I see other college students (I'm only talking about North Campus colleges and some good South Campuses) participating in the competitions and seminars conducted by their colleges only, I feel so

unfortunate about myself and other KMVians and sometimes, it sounds true when people say "You are finished already if you didn't make it to North Campus" and I'm already feeling that. It feels like a school with which provides a bachelor's degree and nothing more than that to be very honest and truly no exposure which a college student should get to boost their confidence. Nothing! Now, I'm so frustrated that I've simply stopped taking lectures and attending college because without attending the college also, it makes no difference. Rather, I've joined other colleges' additional courses that will surely help me in growing my CV for my further studies. Horrible experience with KMV. I would never recommend it to anyone.

1. Treating what's in the curriculum more rigorously
2. Going beyond the curriculum with latest research (as a regular rather than special practice)
3. Setting up a framework for extensive training in particular specialty areas which relate to academic and career advancement

Involve more practical lessons relating to the real world  
More extra curricular activities will lead to better personality traits

Teachers don't know how to teach, judge students in the basis of their attendance only, give unnecessary IA

1. Departments should give stake to student bodies in decision making, eg. Tughlaki rules such as not allowing personal laptops inside computer labs.
2. Providing spaces(actual physical spaces to sit) for healthy discourse and efforts from the institution for inter departmental and inter college projects. Desegregation between students and professors(eg. library) so we can interact much often outside the classes as well, it is important to have a certain culture in college.
3. Departments making efforts in bringing top industry leaders, academicians and Ph.D scholars for guest lectures. Currently the onus is on societies and we end up with only alumni.

1. First we should know the ability of Student, don't is getting the concept which is presenting to them if not we have to on that topic for the students
2. We need to encourage the student. We have to give focus on all students not on only the students who are getting the topics easily we have to focus on all students which promotes our education and college and mutual respect will be generate in students and professors
3. Also we have to develop our mind set we have to start a new & efficient way of teaching .

Try to organise class discussion quiz competition,between different section of same course every week after completion of one topics . Try to provide prize 🏆, encouragement certificate which will boost moral of student for study . Principle ma' am should come out of their office and try to know student problems and she should also take part class discussion of specific subject to give encouragement to student.

Most of the teachers are not capable enough to teach the subject because they lack thorough knowledge and teaching skills. Better screening procedures before selecting teachers would be helpful.  
There should be consequences if the teacher could not finish syllabus on time because they are never able to finish syllabus and then students are burdened with doing everything on their own.

There should be consequences for those teachers who barely take classes (a teacher took just 4 classes in the entire semester).

more extra curricular activities can be done.  
Have to increase sports activities.  
By giving more resources to college societies.

- 1.The teachers should explain programs and problems with more details and with real life experiences.
- 2.projector in classes sometimes doesn't work.
- 3.Practical work should be more then theoretical.

1. There is fair little in the name of grievance redressal in this college, and some of the decisions made by the administrative staff are downright baffling (eg: keeping the main gate closed for students).
2. Internal assessment and practical guidelines need to be made less obtuse. The purpose of assessment is to IMPROVE students' understanding of core concepts, not score them poorly out of spite without explaining how they could improve.
3. One of the staff members was consistently rude to me and my classmates, making attending any lectures taken by her an absolute hassle. I was scared to attend her classes, lest she belittle me or my peers. If this is the caliber of educators this institution feels warranted to hire, there's something fundamentally wrong with its approach education.

Overall, the quality of professors varies widely within the department, with some heinous exceptions overshadowing the excellent professors who clearly serve as the backbone of the department.

Promoting students for extra curricular activities.  
Lack of college societies and negligence in students initiative to introduce one.  
Encouraging more activities in college.

Holding either new sets of recruitment or providing them proper training should help them inculcate better approaches  
Enhancing the methods of redressal; compl  not taken seriously and there's a lack of consideration.  
Making administrative staff more empathetic and sensible ought to decrease the level of stress endured for trivial matters like admit cards and ID cards, wherein students are supposed to automatically know about things which are never relayed and then undergo utter aggressive behaviour.

Provide more fruitful assignments that aren't redundant handwritten work which are a huge waste of time. Please increase focus on individual research projects that prepare us for the competitive .

Teachers are not involved with us during our practical classes ,we are just following the steps given in our practical books we are not getting a chance to learn new things and apparatus are also not in good condition

Teacher always assume that students knows this because this is helpful for teacher and they did not do any efforts but students not know the basic and teachers continue his syllabus fastly. Teacher should always less talk and more write when to teach some question solution. And give some examples also.

Use of Smart board  
Preparatory Notes provided to students

1. Gym must be equipped with all equipment at least it should have all that ground lev machines
2. Maintenance of trees and plants around the because it helpful cooling the college surrounding in summers
3. College must support college societies for students to go up in there respective interests

1) Teachers should

College should focus on other soft skills and ECA along with focusing on Academics

the teachers in Psychology department just promote rote learning, and one of the teachers, Dr. Mona Ranga's teaching style is not at all effective. the assignments she gives are not at all helpful and her behavior is also not good with us.

- 1). Teachers should teach practical subjects on boards not by dictating
- 2). Teachers should cover the syllabus even there is 6 or 7 students present because they are reaching college to study.
- 3). College should make the class rooms less of ACs.
- 4). Internships related to all fields should be initiated, information regarding internships rarely reach to us.

Pls talk about internship opportunities  
Skills that would help us in future  
Pls maintain consistency in teaching

Teachers should have the relevant qualifications for the paper they teach. The teacher should be held accountable for the availability and quality of their classes.

A teacher working in the psychology department should not at least be asking students to jump off the balcony.

To maintain what they are right now

Firstly, TEACH.

Take classes.

Don't just rely on students to give the presentations and consider the syllabus covered.

Take responsibility.

1) Investment should be made in Infrastructure heavily. (as the projectors and computers and overall condition of the classrooms and benches are not at all capable to provide basic learning)

2) There is a need to fix the timings of the classes as there should not be any class after 2 pm because many students come from far away places and it takes 2 hours to reach home and vice versa so at last classes should end at 2 pm and not 5 pm which is happening right now.

3) Library should be available at all time because almost all the time the library in our college is closed due to some reasons like protest. Which should not happen because it's the students that suffers.

If teachers can interact with students and ask them questions frequently during the class and assign each student a topic to explain it in front of the whole class I think this would develop the self confidence in students and students won't hesitate asking questions in the class and generates intrest in the class. I think asking questions to students during the class creates fair competition in the class and every one pay much attention to the class,

I saw many teachers just come and just give lecture and assumed students got it and don't ask questions, that is the problem no question means no interaction

Questions develops a challenge in students mind which helps him to think and concentrate, this is the key tell all the teachers to ask questions to the class so often during the lectures sometimes randomly select any student and ask them.

I want to tell my experience of a teacher of my school days, she was a english teacher , what made her a good teacher is that is ask so many questions to students about the topic, says " tomorrow i will ask questions to all of you about this or that topic tomorrow and you wouldn't believe but whole class read the topic happily and answer them i am the weak student at that time because it is hard to learn for me that time but because of that teacher made me feel eager to face the question that are challenged to me and increased my memory power and concentration.

The bond between the students and teachers is created by trust ,yup you heard that right of students feels that the teachers who is in front of them can answer every doubt of his or her and can ask them questions and appreciate them this would be very good.

I am not from phycology but I read some psychology books and found that if anyone appreciate other person that generates an eagerness within the other person to maintain that confidence. So tell students not to demotivate students and appreciate them for each small improvements this would help the students lot more.

I saw, teachers says they will clear the doubt but when asked they demotivate students by explaining thier incompetence.

This whole thing is an eternal truth.

Also tell teachers to smile in the class, that serious face make them less approachable if a person have a smile on its face it conveys his or her friendly behaviour and make them more approachable.

I want to tell my experience of a teacher, I would not name, but but there is a soothing friendly smile on her face every time she teaches us that creates her so approachable that even within a week no hesitation to ask questions ever faced me, no nervousness nothing and increased respect of this teacher in everyone eyes.

This this the observation and my suggestions from my experience that I observed from my teachers who are like God for me, i respect my teachers if there is any point that you fined offensive please pardon me and please accept my apology please consider each point, they are very important these small steps can make our education system much better because art of teaching is not just about how to teach but also lies in art of expression , body language, openness and understanding.

Thank you 🙏

I would request the teachers to inform the students one day prior if the there is no class the next day. Many times, it has happened that the students have reached college by travelling for an hour or 2 hours and then the message from the teacher arrives that there is no class. I would request the teachers to be mindful of the fact that they are not the only ones who are busy. The student's time is equally important as most of them are involved in other activities or courses other than their respective course. A student' average total travelling time is 2 hours (to and from) and sometimes, it can go as high as 4 hours. When this happens, the entire time ,which the student has to now spend travelling, is wasted.

Teachers one on one counselling will be appreciable, interaction more with the student in the class and off the class with the student for their career, future planning and for the doubt. Live projects, seminar, and competition can give a good exposure to a student. Internship offer by college, student

exchange program are the needs of every student to have an understanding of how to do work in an organization and a good exposure to a foreign culture, different dynamic, language will be appreciable.

- 1 = way of teaching is good
- 2=Teacher's are coordinating with students
- 3=Teacher's is good
